

Exhibit A

WASHINGTON CITY NET METERING POLICY

Effective Date: January 9, 2008

Availability:

Washington City ("City") desires to encourage the use of Renewable Resources by supplying a meter to provide the necessary accounting to allow a customer to displace electric energy otherwise purchased from the City or to provide electric energy to the City ("Net Meter"). The Net Meter will be available to any electric customer connected to Washington City's electric distribution system provided that the customer installs a solar, wind, or other city-approved renewable generation resource ("Renewable Resource") on the customer's side of the meter, subject to the Application Provisions.

Application Provisions:

A customer must make an application to Washington City and receive approval from the City before installing an interconnected Renewable Resource on their property. Washington City may withhold approval if for any reason the requested interconnection would result in a negative monetary or physical impact on the City electrical system.

By accepting a Net Meter, the customer hereby agrees to the following provisions:

1. The monthly electrical output of the Renewable Resource shall not be greater than 120% of the historical maximum monthly energy consumption of the customer.
2. A Renewable Resource shall be manufactured and installed to interconnection standards that meet or exceed the Institute of Electrical and Electronics Engineers, Inc. ("IEEE") standard 1547 for Interconnecting Distributed Resource with Electric Power Systems and Underwriters Laboratories Inc. ("UL") standard 1741, Inverters, Converters and Controllers for use in Independent Power Systems
3. Washington City shall have the right to inspect a customer's generator facility during reasonable hours and with reasonable prior notice to the customer. If the City finds that the customer's generator facility is not in compliance with the requirements of the City's interconnection rules and the standards set forth in this Policy, and non-compliance adversely affects the safety or reliability of the City's facilities or other customers' facilities, the City may require the customer to disconnect the facility until compliance is achieved.
4. If the City disconnects the Renewable Resource, the customer shall receive in a timely manner, a written explanation of the disconnection. The customer shall have the right to correct the situation and petition the City to reestablish an interconnection.
5. Washington City shall install and maintain a new revenue meter for the customer, at the City's expense. Any subsequent revenue meter change necessitated by the customer,

whether because of a decision to stop Net-Metering or for any other reason, shall be pursuant to the City policy.

6. The customer will release to the City all renewable energy credits (RECs), solar renewable-energy credits (S-RECs) or other renewable attributes as appropriate based on actual on-site electric generation from the Renewable Resource.
7. The customer will comply with all Washington City service and billing requirements.
8. The customer will comply with all installation, building and electric codes of the City.
9. The City shall make Net-Metering available to eligible customers on a first-come, first-served basis up to 1 percent of the City's most recently measured annual peak load.
10. A customer facility used for Net-Metering shall be equipped with metering equipment that can measure the flow of electricity in both directions at the same rate. For customer facilities less than 10 kilowatts (kW) in rated capacity, this shall be accomplished through the use of a single, bi-directional electric revenue meter that has only a single register for billing purposes.
11. Customer shall be solely responsible for all work, and costs incurred, for installation and maintenance of the Renewable Resource.

Inspection:

Upon approval and installation of a Renewable Resource but before interconnection to the Net Meter, the City shall inspect the Renewable Resource, installation and interconnection and approve or disapprove the interconnection. The City may disapprove any final interconnection for any reason.

Energy Rates and Payments:

The customer shall be subject to the following provisions for service under this Policy:

1. For all kWh delivered by the City the customer shall pay the normal City rate for customer service as if the customer had not installed a Renewable Resource.
2. The City shall credit customer's bill for kilowatt-hours (kWh) that exceed the customer's on-site consumption of kWh in the billing period following the billing period of excess production at .04 cents per kWh.
3. Washington City reserves the right to modify or amend this Policy, the City's avoided cost rate, the displacement ratio or the monthly service charge upon reasonable advance notice to the customer. (60 days.)

Force Majeure:

Neither the City nor the customer shall be subject to any liability or damages due to the inability of Washington City to serve the customer's load due to lack of energy from either the City or the Renewable Resource.
